Education

Bangalore Institute of Technology, Bangalore **2022 – Sep 2026**
Bachelor of Technology in Computer Science and Engineering

Experience

Unrise **Oct 2025 – Dec 2025**
Intern *Bangalore, Karnataka*

- Architected and enhanced a client-facing frontend using JavaScript and React, improving component reusability, UI responsiveness, and overall application stability.
- Designed and implemented fully responsive, state-driven carousel components using React hooks, optimizing content rendering and increasing user engagement by **20%**.
- Led end-to-end frontend delivery by translating client requirements into scalable UI components, reducing iteration cycles and accelerating feature completion by **25%**.

Centre for Airborne Systems (CABS), DRDO **Feb 2026 – May 2026**
Project Intern *Bengaluru, Karnataka*

- Architected and deployed a 3-container observability stack (Wazuh Manager, OpenSearch, Dashboard) using Docker on a Windows host, standardizing centralized log aggregation, real-time alerting, and severity-based incident triage, improving system visibility and monitoring coverage by **60%**.
- Provisioned a virtualized network gateway on Alpine Linux with iptables and ipset, automating IP blocking, port filtering, and GeoIP-based access control using MaxMind GeoLite2 CIDR datasets, reducing rule-set complexity by approximately **85%** through kernel-level ipset hash sets and improving lookup performance at scale.
- Built a full-stack infrastructure management dashboard using FastAPI (REST backend) and D3.js (frontend), enabling real-time rule deployment, traffic observability, and alert monitoring, cutting manual operational overhead by **90%** and reducing deployment turnaround by **70%**.

Technical Skills

Data Management & Quality: Item Data Setup, Data Accuracy, Data Validation, Data Remediation, Data Consistency, Root Cause Analysis, Troubleshooting.
Microsoft Office & Collaboration: Microsoft Excel (Pivot Tables, VLOOKUP), Outlook, Stakeholder Communication, Cross-Functional Collaboration, Training & Documentation.
Data Visualization & BI: **Power BI**, **Tableau**.
Data Engineering & Big Data: **Databricks**, **Big Data Analysis**, Apache Spark, PySpark, Delta Lake, Medallion Architecture.
Scripting & Programming: Python, SQL, Bash, Java, JavaScript.
AI-Assisted Coding & Tools: Claude Code, Codex, Antigravity, LangSmith.
Cloud Platforms: AWS (EC2, S3, VPC, IAM, ELB, Auto Scaling, CloudWatch), GCP.
CI/CD & Automation: **DevOps CI/CD Pipelines**, Jenkins, GitHub Actions, GitLab CI/CD, Terraform, Ansible.
Containers & Orchestration: Docker, Kubernetes, Helm, ArgoCD, GitOps.
Version Control & OS: Git, Linux, Alpine Linux.

Projects

Multi-Tier Cloud Infrastructure Deployment | *AWS, Terraform, Ansible, Jenkins, Docker* **Aug 2026**

- Provisioned and migrated a multi-tier application to AWS (EC2, VPC, ELB, RDS, S3, Auto Scaling) using Infrastructure as Code with Terraform, cutting environment provisioning time by **40%**.
- Automated configuration management and deployment workflows with Ansible playbooks and roles, reducing manual server setup effort by **50%** across dev and staging environments.
- Designed and implemented CI/CD pipelines using Jenkins and GitHub Actions with Nexus and SonarQube integration for automated builds, code quality checks, and deployments, decreasing release cycle time by **30%**.

GitOps Deployment Platform on Kubernetes | *Kubernetes, Helm, ArgoCD, GitHub Actions, Prometheus, Grafana* **July 2026**

- Containerized and deployed a production-style application on Kubernetes using Docker images, Helm charts, and Ingress, achieving zero-downtime rolling updates and horizontal autoscaling.
- Built an end-to-end GitOps workflow with GitHub Actions and ArgoCD, automating container builds and continuous deployment from a Git-based single source of truth, reducing deployment errors by **35%**.
- Set up centralized monitoring and observability using Prometheus, Grafana, and Loki with PromQL-based alerting, improving incident detection time by **45%**.

End-to-End Databricks Data Engineering Project | *Databricks, Apache Spark, PySpark, SQL, Delta Lake* **June 2026**

- Ingested raw data into Bronze tables and applied structured transformations to create Silver and Gold layers following the Medallion Architecture for scalable analytics.
- Built Delta Lake tables with ACID transactions, schema enforcement, and time travel, ensuring data reliability and simplified recovery from data issues.
- Optimized Spark SQL queries using partitioning, caching, and efficient data modeling techniques, reducing job execution time and improving analytical query performance.
